

Technology 360

Presenting the world of technology for young researchers

From wireless communications to video games and robotics

NEW SERIES! Designed specifically for middle and high school students, Lucent Books' *Technology 360* explores the impact of such devices and advances as cell phones, portable music players, online social networks and other topics. Each volume focuses on a particular innovation in detail, tracing the history and scientific breakthroughs leading to its creation; explaining in easy-to-understand language how it works and is used; describing its impact on society, including ethical, legislative, safety and scientific implications; and considering its future development and uses.

The series directly supports science curriculum standards that require students to understand how technology influences society through products and innovations; to explore the benefits and unintended consequences of technological advances; and to learn about the people who have made significant contributions to science and technology.
