## ABOUT THE SERIES:

Founding Editor: **I. Edward Alcamo, Ph.D.**, Distinguished Teaching Professor at State University of New York, Farmingdale was the 2000 recipient of the Carski Award for Distinguished Teaching in Microbiology, sponsored by the American Society for Microbiology.

Foreword by **David Heymann**, World Health Organization

Consulting Editor: **Hilary Babcock, M.D., M.P.H.**, is an instructor in medicine in the Division of Infectious Diseases at Washington University School of Medicine and the Medical Director of Occupational Infection Control at Barnes-Jewish Hospital and St. Louis Children's Hospital.

Deadly diseases can affect everyone. Although not all cases are fatal, each disease causes a degree of harm and discomfort to those whom it afflicts and can sometimes have long-lasting consequences. Each book in the **Deadly Diseases and Epidemics** series takes readers through all aspects of a disease—from its history and causes or method of infection to its treatment and prevention. These informative, full-color books provide a foundation for understanding the basics of microbiology, immunology, and epidemiology.

“Each holds almost 150 pages of information charting not only the world history of the disease, but the changes it effected on world society during its course. From the disease’s progress to the various efforts to cure and control it, these are intriguing documentaries...All are highly recommended picks, offering lasting library lending value.”—**Children’s Bookwatch**

**NEW!** Anthrax,  
Second Edition

Antibiotic-Resistant  
Bacteria
