Transforming Education through the Power of Video

Eduvision, the leading K-12 media platform, helps thousands of schools integrate video technology into teaching and learning. [Learn More](#)

Why are schools integrating video into their classrooms? It's simple... And it's powerful. Video is engaging. Video enables students to learn on their own time, at their own pace—whenever, wherever, and on whatever device they use.

Enhanced Learning, Non-Traditional Methods

Teaching and learning is happening in new and innovative ways. Video enables flipped classrooms, blended or distance learning, professional development, or more simply—learning on the go.

Teachers can enhance their skills and effectiveness by participating in professional development and make their core content available anytime, anywhere. Students can learn on their own schedule and use the power of video to deliver homework assignments that showcase their knowledge and talents.

Connecting the Community

More than ever, schools are working hard to enhance community relations and parent participation in school activities because an engaged and informed community makes a significant difference in the overall effectiveness of the education schools can provide. A quality education makes the difference, not only for each student but for the community as a whole.

Schools are using Eduvision to share live and on-demand events such as school board meetings, sports events, concerts, plays, assemblies and announcements.

Easy and Cost Effective

Eduvision's tools and training make it so simple to integrate video into the classroom that most teachers are using it the very next day. Students? They get it immediately.

No more intimidating technology to learn. It's as easy as 3 clicks to capture, create and publish video for a flipped classroom, a homework assignment, a special message to the community—it's only limited by the imagination.

Create, Capture and Publish In Three Clicks

Training Options That Enhance Success

Eduvision Overview

Explore the features of Eduvision, including tiered administration, associated documents, live streaming, video upload/embed, portal embed, Moodle integration, and much more

Flipped Media Essentials

This hands-on course builds a comfort level and experience with cutting edge tools used to create both flipped classrooms and flipped PD.

Eduvision is now integrated with TechSmith's highly popular suite of products, creating the world's simplest way to create, host and distribute rich media and video.

Now you can easily capture and upload video to your Eduvision.tv site. Videos can incorporate multiple sources, including PC cam, cameras, white boards, etc. [More](#)

It's Easy

Step 1: Login

Get your server address, user name and password from your EduVision Relay administrator, and then log in as you normally do.

Step 2: Record

Simply touch record to begin capturing video straight from your device's camera, or import existing items from your camera roll.

Step 3: Send

Give your video a title and description and Submit your video to the EduVision Relay server. Based on your EduVision policies, it will become available in minutes for approval or publish automatically

Training is Key to Effectiveness

Training is a key element of success, and our training is always customized to meet the specific goals of our clients. Our training team has decades of experience working in education, television and film.

Check out our course offerings listed to the left, and feel free to request specific training to meet your needs.

Our clients tell us they use their skills the next day and highly recommend our training.
